Bachelor of Arts in Journalism,
Informatics certificate

WORK EXPERIENCE

The Minnesota Star Tribune

Digital Designer

JUNE 2017 - PRESENT

I started as an intern at the Star Tribune before being hired on full-time by the end of that summer. Throughout the years here, my role has been flexible, allowing me to grow in many areas beyond my job title. Throughout my tenure at the Star Tribune, I have:

- Pitched and developed visual storytelling, owning the project from reporting, to coding, to publication
- Collaborated with reporters and editors to find creative visual solutions for stories without traditional assets
- Used front-end development skills to build bespoke article displays for our enterprise journalism
- Learned new languages, such as Svelte, that allowed for the creation of reusable code components
- Created and standardized templates for our off-platform content to ensure clean design and brand recognition, no matter where readers come across our work
- Trained our audience team on best practices and workflows for the off-platform templates
- Served as a mentor for interns, helping to develop their careers and create a portfolio site to showcase their work

The University of St. Thomas

Adjunct professor

JAN. 2026 - PRESENT

I teach a Media Design Studio class, three times a week, for students at the University of St. Thomas. Throughout the course of the semester, I guide students on:

- Creating a portfolio website using Github Pages and the Bootstrap framework
- Building familiarity with HTML & CSS and using front-end development skills to customize pre-existing components
- Creating work for professional clients, with multiple feedback and iteration rounds
- Developing a muscle for creativity and inspiration, and keeping it strong through consistent training
- Learning to receive and provide helpful critiques
